PITTSBURGH, PA — [December 8, 2009] — Chromalox, a leading manufacturer of electric heat and control products, today announced it has received the Chinese Boiler and Pressure Vessel Manufacture License issued by the General Administration of Quality Supervision, Inspection and Quarantine (AQSIQ.) This certification authorizes Chromalox to manufacture and stamp pressure vessels destined for China. Chromalox is the first electric heater manufacturer to receive a Chinese Manufacture License.

The products are manufactured at the company's facility in Ogden, Utah, which was audited by the Chinese government's Special Equipment Inspection and Research Center. The certification is similar to American society of Mechanical Engineers (ASME) in the United States and Pressure Equipment Directive (PED) in Europe.

“Despite the global downturn, China remains a growing market as the country builds its infrastructure,” said Mark Wheeler, Product Manager - Systems. “The China Manufacture License, combined with our other certifications, ensure our customers will receive the highest-quality equipment, and that Chromalox continues to lead the way in the electric heater industry around the world.”

Chromalox [boilers](#) are made of carbon or stainless steel with fiberglass insulation to offer efficient energy management systems that provide low- or high-pressure steam for industrial processes and comfort heating. The Chromalox line of [circulation heaters](#) are designed for a variety of applications including: clean water; oil; steam; air and gas; and corrosive solution and gas.
