PITTSBURGH, PA— June 30, 2006— Chromalox[®], the world's largest manufacturer of electric industrial heaters, introduces a new terminal enclosure that combines the strengths of multiple designs into one cost-effective, versatile offering. The E4TP is a lightweight, high strength thermoplastic material that has a wide range of applications in harsh environments.

The terminal enclosure has a "¼ turn-twist" lid that opens into a comfortable termination connection workspace. The included o-ring gasket provides a watertight seal when the lid is re-attached, and secured with the self-tapping set screw. The new E4TP terminal enclosure has multiple conduit openings (¼", ½", ¾") and can be rotated and set for fixed conduit locations. Its design provides easy access to the terminal connection. The E4TP is suitable for NEMA 4 and 4X environments, and its high impact strength meets ASTM D256 test standards.

Applications:

- Preheating all grades of oil
- Hot water storage tanks
- Warming equipment
- Food processing equipment
- Cleaning and rinsing tanks
- Heat transfer systems
- Process air equipment
- Boiler equipment
- Freeze protection of any fluid
