Chromalox Announces Updated Line of Multiloop Heat Tracing Controls

New products ideal for controlling temperature, freeze protection in alternative fuels, chemical processing, power generation, oil and gas, wastewater treatment among other industries

PITTSBURGH, PA — [April 5, 2011] — Chromalox, a leading manufacturer of electric heat and control products, is expanding its intelliTRACE family of multiloop heat trace control panels with introduction of the ITLS Series for line sensing and ITAS Series for ambient sensing. Both product lines offer a compact design that combines temperature control, monitoring, and power management in one package.

Designed for industrial use in non-hazardous locations, both product lines offer 40 amps per circuit, with support for up to 72 circuits; SCR control; large touch screen interface, customizable sensor mapping and remote monitoring. The panels support up to 36 loops, with expansion capabilities to 72 loops using matching extension panels.

To ensure ease of use, the control panels feature a 10-inch touch screen computer interface that displays alarm status, set point and process temperatures, and manual and automatic over-ride control for six loops at a time. These controls are accessible locally or anywhere in the world via remote desktop capabilities.

The control panels include both MODBUS[®] and Ethernet communications to support diagnostics demands and safety requirements. The panels feature enhanced data logging as well as GFI and load monitoring and alarms. The panels are UL and cUL certified, with options for CE and FM certifications.

“We are excited to bring the newest members of the intelliTRACE product family to the marketplace,” said Scott Treser, Director of Control & Panel Development. “The ITLS and ITAS control panels offer an affordable, state-of-the art solution that is based on decades of first-in-class quality, design and workmanship.”

About Chromalox, Inc.

For more than 90 years, customers have relied on Chromalox for the utmost in quality and innovative solutions for commercial and industrial heating applications. Chromalox manufactures the world's largest and broadest line of electric heat and control products, including heating components, immersion heaters, circulation systems, heat transfer systems, boilers, industrial and comfort air heating, heat trace cables, sensors and precision electronic controls. With multiple manufacturing, engineering, warehousing and sales locations throughout North America, Europe and Asia, Chromalox is a global supplier providing the highest level of customer support. Chromalox is headquartered in Pittsburgh, PA.
