Type UB-23E and UB-32E
Forced-Air Heater With or Without Switch

Dimensions —

Rubber Feet Provided for Wall Mount Models Only.

For Lower Height from Ceiling: Customer to add Extension Strap.

*Note: Model Numbers with suffix “A” added do not include a switch. Model Numbers with suffix “B” added include a switch (switch not available on UB-32E rated 120V).

WARNING: Hazard of Electric Shock. Disconnect all power before installing heater.

Note: These heaters are designed for wall or ceiling mounting only. Other modes of mounting voids factory warranty.

1. Height above floor
   A. In areas where ceiling height is more than 12 feet, recommended mounting height is approximately 10 feet to underside of heater.
   B. For ceiling heights of 12 feet or less, maximum mounting height is determined by use of ceiling mounting brackets offered for these heaters. Minimum spacing to ceiling is 3’ (see Figure 2).

2. Spacing to adjacent walls
   A. Rear of case to back wall 4-7/8” minimum (see Figure 2).
   B. Side of case to side wall 6” minimum (see Figure 2).

3. If two or more units are operated in the same enclosed space, their discharges should be directed to aid in development of mass air movement for uniform heat dispersal.

4. Controlling thermostats to individual heaters should be mounted at shoulder height on inside walls or columns.
WIRING

Note: All wiring should be done in accordance with local codes and the National Electrical Code by a qualified person.

WARNING: Hazard of Electric Shock. Any installation involving electric heaters must be effectively grounded in accordance with the National Electrical Code to eliminate shock hazard.

1. Connect heater according to the voltage and frequency specified on the nameplate and using the appropriate wiring diagram (Figures 3 and 4).
2. Motor connections: 120V — white and black, 208/240V — white and blue. Insulate (wire nut or tape) unused leads.
3. Protection against overheating is provided by an internal automatic thermal cutout which opens the electric circuit if the normal air-flow is restricted or stopped. Cutout automatically energizes heater on removal of the obstruction.

WARNING: Users should install adequate back-up controls and safety devices with their electric heating equipment. Where the consequences of failure may be severe, back-up controls are essential. Although the safety of the installation is the responsibility of the user, Chromalox will be glad to make equipment recommendations.

OPERATION

DANGER:
1. Do not restrict air-flow through the heater by placing fabric or other obstructions in front of or behind the heaters. With some combustible materials, the resulting high discharge temperatures could cause a fire.

2. This heater is not intended for use in hazardous atmospheres where flammable vapors, gases, liquids or other combustible atmospheres are present as defined in the National Electrical Code. Failure to comply can result in explosion or fire. For these applications see PDS CXH-EP (PF305).

MAINTENANCE

WARNING: Turn off all power to service heater. Do not attempt to service heater while unit is operating as there is hazard of electric shock, injury from operating fan, and burns from hot heating elements.

1. Fan motors in these heaters are provided with sealed ball bearings, factory lubricated, requiring no further lubrication under normal service conditions.

2. Following long periods of idleness, heater should be vacuumed before start-up, to remove accumulated combustible particles which otherwise may smoke or incinerate on initial heat up.

3. Periodically inspect all electrical connections and terminals to avoid electrical wiring difficulties.Inspect all wiring for frayed or worn insulation.
